

```
1 package com.test.scala2
2
3 object wordCount {
4     def main(args: Array[String]): Unit = {
5         val wordList = List("hello", "world", "ni", "hao",
6                               "hello", "ni", "hello", "hao")
7         var result = wordList.groupBy(w => w).map(t => (t._1
8             , t._2.size))
9         println(result)
10
11     }
12 }
```
